Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2829

1. Applicant's election of species of figure 1 in Paper No. 8 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 4-5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species of figure 3 and 4, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 8.
3. It appears that claims 1-2 are not generic to all species because figure 4 does not have an AC signal applied to the actuator.
4. The drawings are objected to because element (1) is not shown in any of drawings. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
5. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, it is unclear how a distortion of said electrostrictive elements is interrelated and associated with the amount of deformation?

In claim 2, it is unclear how the electromotive force is interrelated and associated with the absolute value in claim 1.

The dependent claims not specifically address share the same indefiniteness as they depend from rejected base claims.

Art Unit: 2829

6. Since claims are indefinite, no art has been applied to these instant claims .
7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Harada et al (Pat # 5,233,260) disclose stack type Piezoelectric element and process for production thereof.

Crotzer (Pat # 5,910,700) disclose a dust sensor apparatus.

Near et al (Pat # 6,107,726) disclose serpentine cross section piezo electric linear actuator.
